## ASTG receives order for military-grade VSAT antennas from Israeli customer

ASTG, a developer of maritime satellite antennas, has received an order for delivery of military-grade VSAT antennas and associated services from an Israeli customer worth approximately USD 2.9 million. Deliveries are mainly scheduled for the second half of 2018. The order also includes options for purchase of additional antennas, services and equipment valued at about USD 0.8 million mainly for deliveries planned after 2018.

The order is a confirmation of our customer's interest in a long-term cooperation with ASTG regarding stabilized VSAT antennas for the maritime MILSAT segment. The deliveries will consist of ASTG's new generation of MIL-compliant antenna systems, based on the P9 platform and the project will be carried out in close cooperation with the customer.

### ***About Advanced Stabilized Technologies Group AB***

*ASTG AB develops, manufactures and supplies innovative 4-axes stabilized VSAT antennas, especially designed for hi-end marine installations. The company also runs development projects based on the C2SAT antenna robot. ASTG includes the wholly owned subsidiary AIMS AB, which develops and sells advanced inertial sensors (IMU's) intended for measuring movements in three dimensions.*

*The company headquarters are in Stockholm.*
